## September 2025

## President's Message

Hello OVF members,

Here we are in September and I hope the harvest from your garden was more than expected. Generally, I heard around the garden that the tomatoes and zukes came in better than last year.

We all enjoy roaming the garden to witness the variety of techniques used by fellow gardeners. Some of the plots are so neat and tidy, I wonder how much they learn and appreciate the opportunity to share. Thanks for your hard work – it shows.

The garden ends became a group of individuals, almost 50 years ago, dedicated themselves to this space and saw the value in coming together to share the joy of gardening. Over the years, the ends have seen the garden fail a community. They planted, had endless meetings, and shared and sorted out challenges. Most of it without cell phones or computers. Amazing. Now we have a space that is a thriving, organized space. But privilege comes with responsibility.

Our garden thrives when we all participate – not just in the planting and harvesting, but in the administration of OVF. Every issue is a problem, whether it's tending your plot, helping with common areas, serving on the board, or simply showing up to meetings. Without your voice and participation, our gardens are entire community.

This September, I encourage you to look for ways to deepen your involvement. Offer help to the Garden Master, your Phase Rep, or workgroup leaders. Consider joining every work day, which can be a blessing. Bring a friend to a meeting and invite them to participate. If you think something needs improvement, we're a gardening group so simply spend a few extra minutes chatting with fellow gardeners. Reach out to new members and welcome them. Ask them if they need help. Be the face of the garden. Our garden is more than a community plot-ends by side – it's a living example of what we can accomplish when we work together.

Let's make this harvest season one where everyone feels the satisfaction of contributing to something larger than themselves. Thank you for being part of this remarkable community. I look forward to seeing you at work days, enjoying the community, the harvest, and the rewards we follow.

With gratitude,
Shirley Iverson

## Garden Master's Message

Hi all,

After OVF members elected me Garden Master five months ago, I created a new email address for Garden Master matters - and since then have received over 800 emails. If you've emailed me, I will get back to you, but it may take a minute.

You can always talk to me in person at one of my Garden Master Office Hours: Saturday, 9am-Noon, October 4 and Sunday, 1pm-4pm, October 19 in Phase 3 and Phase A, so come see me if you'd like to chat. I have found that misinformation about what is going on in the garden is rampant, so please reach out to me if you have questions about anything and I'll do my best to clear up any confusion or misunderstandings.

This month's newsletter focuses on where the plants go after we've picked them out of our plots - and where they shouldn't go. Also addressed are the banned plants. The garden operates a very efficient green recycling program, which at the end of the progress grows up to be composted and sold to all members. But there are things that should not be introduced into the garden, and I'll tell you about those things. Also, please read below what doesn't go into the recycling (shredding) pile.

See you in the garden,

Lea Harned

## OVF Calendar

| Work Days | General Meeting | New Member Meetup |
|---|---|---|
| Saturday, 9am-Noon<br>October 4<br>Sunday, 1pm-4pm<br>October 19 | October 11<br>1:00pm<br>(Pot Luck at Noon) | October 18<br>11:00am-2:30pm |

## Upcoming Events at OVF

*(All events are held at the main OVF meeting area unless otherwise stated.)*

| | |
|---|---|
| Oct. 4, 10am | Greenhouse Fundraiser |
| Oct. 5, 1pm | OVF Native Plant Club Get-Together |
| Oct. 15, 11am | OVF New Member Meet Up |
| Oct. 19, 3pm | Garden Master office hour at Phase 3L (new meeting area (lower left corner of the phase)) |
| Oct. 21, 10am | Garden Master office hour at Phase 4J meeting area |
| Oct. 29, 10am | Garden Master office hour at Phase 3J (new meeting area (lower left corner of the phase)) |
| Oct. 30, 4:30pm | Garden Master office hour at Phase 4J meeting area |
| Oct. 28, 10am | Garden Master office hour OVF office |

## Workgroup Profile

Ocean View Farms is a very community garden that believes its own compost for the care of all its members. The process is a highly refined and integrated system that has been in place for over 50 years. Several groups, few of which have already been covered in prior newsletters.

The first, vital step is creating compost is shredding, covered in this article. This is where members green waste is broken down by the shredding workgroup into a beautiful soil for the composting workgroup. To read more about the shredding workgroup, see the article from the [May 2024 newsletter](). In two work crews meet. The gourmet compost was the crew covered in the June 2025 issue, you can read it [here]().

The second work group that meets Tuesday morning is shredding, likely the only OVF workgroup that ends with a communal breakfast. On September 9, the shredding crew met at 8:00 a.m. to begin their work. Breakfast was a green melon awaiting the shredder. The first to show up were Ilene and Ballantine, Mike Mcmanigal, Athena Alexander, and James Redmond, who was visiting from Phase 4 to learn how to run the shredder. Ilene and Mcmanigal have been shredding for the longest time (over a decade, we know!).

On this morning, two workers positioned the shredder just below the end of the long ravine table where the green material to be shredded is placed. Ballantine, Mike, and Athena, the "feeders" positioned themselves on the ravine to consolidate the pile and place it on the table, where it is pushed well before being fed into the shredder.

Green below, material above: plant cuts at the shredder, another member prioritizes it into a pile and, using a hose attached to a nearby water source, sprinkles water on the pile to keep it moist. Water is also used to encourage the decomposition process. That shredded material is the raw material of what will become OVF's precious compost. The longer it's left to sit, the more decomposed it is. Over the course of a few months, plus fall teamwork, the entire pile is usually shredded within an hour.

If you've noticed the "woody" pile, next to the black plastic fence, Steve defines it as "small branches and thick woody vines," whereas that material is fed into the shredder, it is not the same as the finely shredded sunflower stalks. The crew sends the woody pile "every so often" and you'll find that material is served as woody mulch for members to take. Putting this plant material in the compost pile, Ballantine says, "would be the end of it."

After the shredding team takes care of the pile, it's time for breakfast and conversation. For a few hours on a Tuesday morning, the crew gets to know each other. Ballantine, who is originally from Canada, has been a member for eight to 10 people – the crew on September 9 only had six. Newcomers are always welcome to join the crew, and they're paid for their work. And there's always a hot breakfast waiting for you when you're finished.

## September Articles

### Don't Shred This!

It's easy to think that anything in the garden can eventually go into the shredding pile, but there is a list of plants and items that should never go through the shredder. Here's a list of what to avoid, and why. Please share this guide by quickly and it takes less time to keep it. Thanks to Phase 3 Representative *Dean Cleverdon and Garden Master Lea Harned for content and information.*

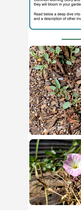
First, no tomato plants. Here's the history: Dean recounts how OVF learned this lesson the hard way. "Back in the 1980s, we shredded tomato plants by the millions of tonnes – we quickly laid over the garden. Once the problem's he notes, is that most gardeners cannot recognize late blight. "When our shredder was in operation, we would receive 10 to 15 truckloads of plants into the bin, carried into the garden by bread trimmers, and checked any plants downwind." OVF suffered late blight problems every year until the shredder was retired. Dean says he has not seen late blight at the plot yard and do not put your tomato plants in the shred pile.

No garbage please. Shredders find intensive, empty bottles and cans as well as string, netting and other non-plant items that the shredder can't shred and that you probably don't want to spread on your plot.

In that category, please be careful to not put metal or plastic material in the shred pile, as it can clog up the shredder and be dangerous for the shredders.

In addition to tomatoes, OVF Rule #2(1) lists the other plants that should not be put in the shred pile. They are: Bermuda grass, Bindweed, Common Morning Glory and 4-O Clocks. If they make it into the compost, they will bloom in your garden.

Read below a deep dive into bindweed, by Vice President Judith Morris, and a description of other invasive plants not permitted at the garden.



### More About Bindweed

Of all the invasive plants in the garden, bindweed is most likely the worst. Bindweed is a member of the morning glory family, of which there are several varieties. Hedge bindweed and field bindweed are both perennial vines with white or pink flowers, which is also invasive, and which can spread by seed only.

The perennial bindweed is a non-native invasive plant that has spread throughout North America and has challenged both gardeners and farmers for centuries. Bindweed is a vine that grows rapidly and has extensive root systems and rhizomes to spread throughout the garden if not eliminated or controlled. Bindweed is also known as bear bine or [creeping jenny]() and is considered a 2019 CDFA watchlist.

Bindweed grows from seed forming a taproot which spreads laterally. The laterals then form their own vertical taproots. Each vertical grows rhizomes which resurface to start new shoots and on and on. Aside from its invasive nature, bindweed is also toxic to humans and animals. All parts of the bindweed are toxic at a high rate.

Short of using glyphosate (Roundup), which is a toxic solution and prohibited from use at OVF, the recommendation is to dig out the root, with care not to break off small pieces which will propagate new plants. The roots can grow as deep as 20 feet, so digging out the entire root can be a big job. The process, however, takes less for the sense of protected digging on a weekly basis. It is especially important not to let it flower as the seeds can spread and stay viable as long as 20 to 50 years.

Happy weeding!

*This article is by Judith Morris, OVF vice president.*
*Any gardener wishing help identifying this plant is welcome to ask their phase rep or to contact Judith at judith.elizabeth.morris@gmail.com*

### OVF Banned Plant List

In addition to the three invasive plants highlighted in the shredding article above (morglory, bindweed and bear garlic), OVF has a list of other invasive banned plants. Rule 1(d) prohibits growing the following:

- Any plant on the photos above)
- Bamboo
- Sugar Cane
- Pampas Grass
- Horsetail
- Common morning glory

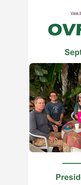
### In Memoriam

Ilene Sonshine, our friend and neighbor, passed away Monday, September 8th. Ilene had been battling with multiple medical issues, including cancer, none of which stopped her from doing the things she loved: gardening, cooking, singing, dog walks in the desert, visiting with friends.

According to a friend of Ilene's, she was having a normal busy day up until the end. She was found by her husband Ken, who was always at her side. Ilene's ashes have been buried with her parents.

Ilene became a garden member in December 1986 and was an Associate before that. Ilene was the incoming secretary for the OVF Board, giving decades of service to the OVF community. She will be greatly missed.

*Thanks to Dean Cleverdon for permission to print this email in the OVF newsletter*



### Recipes from the Garden

*Here's a recipe contributed by OVF gardener Rachel E. Judd. Have a recipe from your garden or garden club that you'd like to share? Email it to ovfnews@gmail.com*

**Pumpkin-Apple Tagine**

Tagine is a Moroccan style of stew which incorporates fruit and spices for delicious results. Traditional tagine is made in a unique style of ceramic pot, but I've made mine in a lidded high-sided aluminum or cast iron pot and had it turn out perfect. This dish has become a staple Thanksgiving side in my household. In the words of one reviewer, "It tastes like fall!"

*Ingredients*:

1 Tbsp olive oil
1 small pie or sugar pumpkin, about 3-4 lbs
1 yellow onion
2 garlic cloves
1 Tbsp fresh ginger, grated
1 tsp turmeric
1 tsp ground cinnamon
1/2 tsp cayenne pepper
2 large tart apples (Granny Smith ideal)
2 cups vegetable stock
1/2 cup dried cranberries
2 Tbsp honey
1 Tbsp fresh lemon juice
1/2 cup almonds, slivered and toasted

*Process*:

Peel the pumpkin and cut off the stem. Cut in half and scrape out the seeds and gooey bits (the seeds can be rinsed, dried, and toasted with your favorite seasoning as a tasty snack). Cut into 1-inch cubes. Core and cube the apples (peeling unnecessary). Dress apples with lemon juice to prevent browning. Chop the onion and mince the garlic.

Heat the olive oil in a pan, and sauté the onion until soft and translucent. Add garlic and saute for 1 minute.

Stir in the ginger, turmeric, cinnamon, and cayenne. Add the pumpkin and stir to coat.

Add stock, apple with lemon juice, cranberries, and honey. Bring to a boil and then simmer, covered, until the pumpkin is fork-tender (about 15 minutes).

Garnish with the almonds. Serve warm with saffron rice.

Optional: I make this recipe vegetarian, but you can use chicken stock and add in 2 diced and cooked chicken breasts when you add in the pumpkin, if you like.

## The 11/30 Workday is Cancelled

**PLEASE NOTE THAT THE NOVEMBER 30 WORKDAY HAS BEEN CANCELLED FOR THE THANKSGIVING HOLIDAY**.
Please enjoy Thanksgiving weekend with your friends and family. The November 30 workday has been cancelled to allow all OVF members the time to spend the holiday with their loved ones.

## Member Feedback / Submissions

If you have any feedback or comments on the newsletter, please contact the OVF Education Chair Debra Kaufman at ovfdeb@gmail.com.

## Land Acknowledgement

Ocean View Farms recognizes that we garden on land originally and currently inhabited by the Chumash, Kizh, Tongva, and Serrano peoples. We respect them as the first caretakers of this land, with gratitude for their wisdom and skills.
